

Advanced Ultrasonic Clinical Intensive Programs

New research requires clinicians to re-evaluate traditional dental hygiene therapies. This program is designed to implement the most current technologies to develop advanced instrumentation skills with an emphasis on safety and comfort for the operator. This information packed “hands-on” session focus on strategies for providing comprehensive dental hygiene care. The workshops allow for clinicians & client interaction as the material presented encompasses the latest information of power scaling with special emphasis on clinical techniques. Sessions are facilitated with “Real Clients”, not study models. Class is limited to two participants in order to provide a “**YOU-NIQUE**” and rewarding continuing dental education experience.

These outstanding programs have been designed for the dentist or hygienist that want to refine their skills in periodontal debridement. Don't miss you opportunity to participate in these leading edge, clinical workshops. The distinction between hand instrumentation techniques (that have been used for ages) and the “Holbrook Concepts” will rejuvenate you and revolutionize your dental practice!

Note: The facilitators for these programs do not represent or earn a commission from any dental manufacturing companies

Benefits for Your Dental Practice

- Dramatically improves dental hygiene department production
- Positive client acceptance to help build your practice & increase client referrals
- Full range of client applications from simple scaling to advanced periodontal cases
- Effective management of complex & fragile periodontal clients in general practice
- Minimizes frequency for periodontal referrals of advanced periodontal cases
- More cost effective than hand instruments due to reduced maintenance costs by retipping, modifying or repairing ultrasonic inserts
- Fully upgradeable equipment which eliminates obsolescence with improved technology and research
- The same manually-tuned ultrasonic scaling techniques used by leading periodontists throughout North America and recommended by the Pankey Institute

Benefits for Your Clients

- Improved client comfort over other methods of root debridement procedures
- Positive client attitudes regarding frequent periodontal recare appointments
- Less apprehension about non-surgical periodontal procedures
- Anesthesia needs are dramatically reduced or eliminated
- More thorough calculus, bacteria and endotoxin removal especially in difficult areas
- Continuous water lavage with warm water for hypersensitive areas and root exposure
- Reduced soft tissue trauma resulting in faster wound healing
- Minimal pressure exerted on clients mandible reducing TMJ discomfort
- Manual-tuned scalers produce less noise and instrument sensitivity

Benefits for Clinicians (Dentist and Hygienist)

- Reduced operator fatigue and repetitive motion disorders
- Effective debridement with extra oral fulcrums
- Time management improvement for hygiene appointments
- Periodontal debridement (scaling/root planning) with precision ultra-thin inserts that emulate diagnostic instruments (perio probe and explorers)
- Improved visual field due to minimal water flow
- Decreased tip vibration for enhanced calculus detection and tactile sensitivity
- More thorough debridement of deep, narrow pockets
- Improved access to malpositioned teeth, orthodontic appliances, root concavities and furcations
- Minimized aerosols to reduce infection control concerns
- Smooth “hands-free” power level adjustments through unique foot control
- Entire tip surface provides hard deposit and bacterial debridement

At the completion of these clinical intensive sessions you will:

- Understand the full range of scaling applications from paediatric clients to complex periodontal cases
- Have continual access and on-going support via phone or e-mail as challenges arise while implementing these newly learned concepts
- Develop strategies to include ultrasonics in your practice
- Evaluate various manufactures insert and equipment designs and their clinical applications
- Continue to study at your own pace with a course manual, audio/video material

Onsite Training Workshops will give you the opportunity to learn the “*Holbrook Concepts*” and Advanced Instrumentation Skills
